CRISTAL SUBMETERING SYSTEM

The advantages of Cristal Submetering System (C.S.S.)

This submetering system was developed for building owners in order to monitor and log multiple loads for tenants.

Each KW required by the tenant will be recorded by the Cristal Submetering System.

A constant follow-up of each tenant gives the owner a tool showing the higher power consumption (amps) than the reasonable and allowed level, as well as the date and time of event.

Submetering is it profitable for you ?

The C.S.S. system will help in determining this.

C.S.S. system enables you to create detailed reports:

- For each point (consumption (KW) (Watts))
- For each zone (Power, Watts)
- Compatible to existing billing software.

Help educate users for their energy consumption.

Thus by sensitizing your tenants, the total used power is reduced and savings on cost of operation are carried out.

By providing clients with their exact load profiles, one can now start reducing energy costs in their everyday operation.
